RE: Notice of Intent
670 King Street
Franklin, Massachusetts 02038

Dear Members of the Commission:

On behalf of the Applicant, Mr. Michael Davis, I am pleased to submit this *Notice of Intent (NOI)* for the construction of an unattached garage at the above referenced site. Applied Ecological Sciences (AES) conducted a site evaluation on October 1, 2025. Wetland resource areas protectable under the *Massachusetts Wetlands Protection Act* (M.G.L. c. 131, s. 40), the implementing *Regulations* (310 CMR 10.55), and the Town of Franklin *Wetlands Protection By-law* (Chapter 181) and *Conservation Rules and Regulations* were identified and characterized. The upland/wetland boundary to Bordering Vegetated Wetland (BVW) has been delineated in the field with red flagging tape. A *Site Evaluation and Wetland Delineation Report* detailing the results of the field evaluation is included in Section III of this filing. A detailed Project Description is included in Section II.

I am pleased to be of assistance in this matter. Should you have any questions or require additional information please do not hesitate to contact me at the phone numbers or email address listed below.

Sincerely,

Russell E. Waldron

APPLICATION PROCESS SIGNATURE FORM

There are three different applications that can be submitted to undertake work in a jurisdictional area: a Notice of Intent (NOI), a Request for Determination (RDA) and a Minor Buffer Zone Activity (MBZA). All three applications have different criteria for submission and approval and the NOI and RDA are governed by both the state law and the local bylaw. The MBZA is issued under the local bylaw only.

When a potential applicant requests advice from the Conservation Agent on which application to file, the opinion of the Agent is based on the information given by the potential applicant and any other information available to the Agent, e.g. the town's GIS system. The Agent has no legal right to go onto private property at any time until after an application is filed or permission of the property owner is given.

It is important that all applicants understand that after an application is filed, additional information may come to light e.g. via a field inspection or a review of the application, that may impact the scope of the submitted application and the approval process. **Therefore, it is the ultimate responsibility of the applicant to decide which application to file.**

In light of the above, please sign below indicating an understanding of this policy and submit it with the application.

B. Fees

Fee should be calculated using the following process & worksheet. **Please see Instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

Project Description
670 King Street
Franklin, Massachusetts

Existing & Proposed Conditions

The subject property encompasses residential lot located southerly of King Street in Franklin, Massachusetts. Topography of the site is generally flat. A single-family home occupies the northwestern portion of the property. The central portion of the site is comprised of open lawn with scattered mature trees. An in-ground swimming pool, gazebo, and two sheds occupy the southeastern portion of the property. The southerly most portion of the site is forested. Wetland Resource Areas associated with the site include Bordering Vegetated Wetland (BVW).

The Applicant proposes to remove the existing in-ground swimming pool and construct a 1,500 square-foot garage (15'x 30') with a 240 square-foot attached porch (12'x 20') in its place. A concrete slab and knee wall will support the garage. Standard concrete footings will support the porch.

- Closest distance to BVW: 77.2 ft.
- Total proposed 100' BZ disturbance: 850 s.f.
- Total 0 – 25' BZ disturbance: 0
- Total 25' - 50' BZ disturbance: 0 s.f.

Functions & Characteristics Statement

Function & Characteristic	
1. Public Water Supplies: Distance from proposed project to nearest public well.	Approx. 6,152' W of the Camp Haiastan well (www.massgis.ma.state.us).
2. Private Water Supplies: Distance to nearest private wells.	No data.
3. Groundwater: Depth to groundwater as well as impacts associated with construction (i.e. digging & blasting) and operations (water use, use of toxic or hazardous materials and storm water management).	Depth to groundwater is 0 - 6.0" (USDA SCS, 1989).
4. Flood Control: Work within floodplain must address compensatory storage.	Based on the <i>Federal Emergency Management Agency Flood Insurance Rate Map</i> for the Town of Franklin, Massachusetts, (Map No. 25021C0316F), the site is located within Zone X (non-shaded), <i>Areas determined to be outside the 0.2% annual chance floodplain.</i>
5. Erosion & Sedimentation Control: This item must be addressed for both the construction and post construction conditions at the property.	Erosion controls will be installed prior to the start of construction activities. Erosion controls will be properly maintained and will remain in place until

	all disturbed soils have been stabilized and re-vegetated. Erosion and controls will be inspected daily and especially after significant rain events. Erosion control inspectors will keep a log of all inspections and maintenance and will provide copies of those logs to Conservation staff and Commissioners upon their request.
6. Storm Damage Prevention: Address whether the project will have an adverse effect on the way that the wetland or floodplain will be able to minimize water and wind related impacts during large scale storm events.	No direct impacts to wetland or flood plain. See #4 above.
7. Water Quality: This item must be addressed for both the construction and post construction conditions. This item will address the quality of the surface waters associated with the resource area being impacted by the project.	See #4 & #5 above.

Erosion & Sedimentation Control Plan

Erosion and sedimentation controls consisting of a silt sock or similar will be installed prior to the start of construction activities. Erosion and sedimentation controls will be properly maintained and will remain in place until all disturbed soils have been stabilized and re-vegetated. Erosion and sedimentation controls will be inspected at regular intervals. The site will be kept clean throughout the construction process. All debris, trash, etc will be picked up and properly stored or disposed of before the end of each day. Erosion control inspectors will keep a log of all inspections and maintenance and will provide copies of those logs to Conservation staff and Commissioners upon their request.

**Site Evaluation and Wetland Delineation
670 King Street
Franklin, Massachusetts**

Introduction

A site evaluation was conducted at the above referenced property on October 1, 2025. Wetland resource areas protectable under the *Massachusetts Wetlands Protection Act* (M.G.L. c. 131, s. 40), the implementing *Regulations* (310 CMR 10.00), and the Town of Franklin *Wetlands Protection Bylaw* (Chapter 181) and *Conservation Rules and Regulations* were identified and characterized. The upland/wetland boundary to Bordering Vegetated Wetland (BVW) was delineated in the field with red tape. Resulting data describing the floristic, edaphic, and topographic characteristics of the property has been utilized in the preparation of this *Site Evaluation Report*. The following narrative provides a general site description, resource area delineation methodology, and wetland resource descriptions.

General Site Description

The subject property encompasses residential lot located southerly of King Street in Franklin, Massachusetts. Topography of the site is generally flat. A single-family home occupies the northeastern portion of the property. The central portion of the site is comprised of open lawn with scattered mature trees. An in-ground swimming pool is in the southeastern portion of the property. The remainder of the site is forested. Residential development abuts the site to the east, west, and south.

Forested Upland Description

A moderately dense canopy of Red Maple (*Acer rubrum*), Norway Maple (*Acer platanoides*), Black Cherry (*Prunus serotina*), and Black Gum (*Nyssa sylvatica*) dominates vegetation within the forested uplands. The woody understory is comprised of saplings from the canopy, Oriental Bittersweet (*Celastrus orbiculatus*), Morrow's Honeysuckle (*Lonicera morowii*), and Fox Grape (*Vitis labrusca*). Ground cover species include seedlings from the understory, Pennsylvania Sedge (*Carex pensylvanica*), and Dewberry sp. (*Rubus* spp.).

Soils

Soils underlying the site consist of moderately well drained, Woodbridge (WrB, 310B), fine sandy loam, 3% to 8% slopes and poorly drained, extremely stony Ridgebury (RgB, 71B) fine sandy loam, 3% to 8% slopes (USDA SCS 1989, Map #36, www.nesoil.com).

Wetland Delineation Methodology

The extent of vegetated wetland was determined through observations of the existing plant communities while verifying wetland hydrology through interpretation of soil characteristics and other indications of surface hydrology. Soils were analyzed for texture and color to determine soil morphology in accordance with the most up to date standards. Evidence of surface hydrology was determined through visual inspection of existing site conditions including typical indicators such as water marks, drift-lines, water-stained leaves, sediment deposits, and drainage patterns.

Wetland Resource Description

Wetland resources located on the site include Bordering Vegetated Wetland (BVW) Seasonally saturated Forested Swamp is located within or adjacent to the southern portion of the site. Topography within the BVW is generally flat. A moderately dense canopy of Red Maple, Black Gum, and Slippery Elm (*Ulmus rubra*) dominates vegetation within the wetland. The woody understory is comprised of saplings from the canopy, Southern Arrowwood (*Viburnum dentatum*), Winterberry (*Ilex verticillata*), and Glossy Buckthorn (*Frangula alnus*). Ground cover species include seedlings from the canopy and understory, Jewelweed (*Impatiens capensis*), Jack-in-the-Pulpit (*Arisaema triphyllum*), New York Fern (*Thelypteris noveboracensis*), and Sensitive Fern (*Onoclea sensibilis*).

The upland/wetland boundary to BVW is delineated in the field with AES flagging stations #1 through #1 through #8.

FEMA Floodplain Designation

Based on the *Federal Emergency Management Agency Flood Insurance Rate Map* for the Town of Franklin, Massachusetts, (Map No. 25021C0316F), the site is located within Zone X (non-shaded), *Areas determined to be outside the 0.2% annual chance.*

NHESP Estimated & Priority Habitat

According to the *Massachusetts Natural Heritage and Endangered Species Program* habitat map, the site is not located within an Estimated Habitat of Rare Wildlife or a Priority Habitat of Rare Species.

Area of Critical Environmental Concern (ACEC)

According to the Massachusetts Geographic Information Systems *Area of Critical Environmental Concern Map*, the site is not located within an ACEC.

Water Supply Protection Areas

According to the Massachusetts Geographic Information Systems *Water Supply Protection Areas Map*, the site is not located within a Zone II groundwater recharge or an Interim Wellhead Protection Area (IWPA).

Outstanding Resource Water (ORW)

According to the Massachusetts Geographic Information Systems *Outstanding Resource Waters Map*, the site is not located within a contributing watershed to an ORW.

Buffer Zone

Buffer Zone, as defined at 310 CMR 10.04, means:

The area of land extending 100 feet horizontally outward from the boundary of any area specified in 310 CMR 10.02(1)(a).

Under Section XVI of the Town of Franklin *Conservation Rules and Regulations*, Buffer Zone Protections:

Currently as established by precedent, the Franklin Conservation Commission (Commission) has instituted a 25-Foot no disturb buffer zone from the defined/delineated resource area.

Under Section XVI A: 0 to 25-Foot Buffer Zone Resource Area:

- 1. An applicant shall demonstrate that no work/disturbance including grading activities is proposed within the 25-foot buffer zone resource area.*

Under Section XVI B: 25 to 50-Foot Buffer Zone Resource Area:

- 1. Any applicant proposing a project within the 25 to 50-foot buffer zone resource area shall indicate that there are no structures including, but not limited to, concrete, stone, or other impervious foundations and/or slabs for construction purposes that for all intents and purposes would significantly increase runoff. Alteration within the 25 to 50-foot buffer zone resource area is limited to grading, tree clearing, storm water management components, lawns, gardens, and other low impact uses as determined by the Commission or as otherwise approved by the Commission by the variance procedures set forth under Section XVII of these regulations.*

2. *Areas disturbed prior to June 29, 2006: When there is a pre-existing disturbance (disturbed as part of a previously record Certificate of Compliance or was disturbed prior to the enactment of the Wetlands Protection Act and the Franklin Wetlands Protection Bylaw), and the work proposed is entirely within the previously disturbed area, the applicant may propose impervious surfaces such as pools, buildings, porches, and sheds within the 25 to 50-foot buffer zone resource area. The Commission shall evaluate the proposed uses based upon the demonstration by the applicant that the functions and characteristics of the resource area will not be adversely affected.*

Under Section XVI C: 50 to 100-Foot Buffer Zone Resource Area:

Alterations including structures are allowed in the 50-100-foot buffer zone resource area. The Commission may require additional mitigation offsets when the slope within the buffer zone is steeper than 10%. Additionally, mitigation offsets may be required by the Commission when the applicant proposes that more than 30% of the 50-100-foot buffer zone resource area is proposed to be impervious surface. Mitigation offsets may include, but is not limited to, plantings, conversion of impervious to pervious surfaces, and other practices consistent with the Town of Franklin Best Development Practice Handbook.

The southern portion of the property is contained within the regulatory Buffer Zones.

Project Description
670 King Street
Franklin, Massachusetts

Existing & Proposed Conditions

The subject property encompasses residential lot located southerly of King Street in Franklin, Massachusetts. Topography of the site is generally flat. A single-family home occupies the northwestern portion of the property. The central portion of the site is comprised of open lawn with scattered mature trees. An in-ground swimming pool, gazebo, and two sheds occupy the southeastern portion of the property. The southerly most portion of the site is forested. Wetland Resource Areas associated with the site include Bordering Vegetated Wetland (BVW).

The Applicant proposes to remove the existing in-ground swimming pool and construct a 1,500 square-foot garage (50'x 30') with a 240 square-foot attached porch (12'x 20') in its place. A concrete slab and knee wall will support the garage. Standard concrete footings will support the porch.

- Closest distance to BVW: 77.2 ft.
- Total proposed 100' BZ disturbance: 850 s.f.
- Total 0 – 25' BZ disturbance: 0
- Total 25' - 50' BZ disturbance: 0 s.f.

Functions & Characteristics Statement

Function & Characteristic	
1. Public Water Supplies: Distance from proposed project to nearest public well.	Approx. 6,152' W of the Camp Haiastan well (www.massgis.ma.state.us).
2. Private Water Supplies: Distance to nearest private wells.	No data.
3. Groundwater: Depth to groundwater as well as impacts associated with construction (i.e. digging & blasting) and operations (water use, use of toxic or hazardous materials and storm water management).	Depth to groundwater is 0 - 6.0" (USDA SCS, 1989).
4. Flood Control: Work within floodplain must address compensatory storage.	Based on the <i>Federal Emergency Management Agency Flood Insurance Rate Map</i> for the Town of Franklin, Massachusetts, (Map No. 25021C0316F), the site is located within Zone X (non-shaded), <i>Areas determined to be outside the 0.2% annual chance floodplain.</i>
5. Erosion & Sedimentation Control: This item must be addressed for both the construction and post construction conditions at the property.	Erosion controls will be installed prior to the start of construction activities. Erosion controls will be properly maintained and will remain in place until

	all disturbed soils have been stabilized and re-vegetated. Erosion and controls will be inspected daily and especially after significant rain events. Erosion control inspectors will keep a log of all inspections and maintenance and will provide copies of those logs to Conservation staff and Commissioners upon their request.
6. Storm Damage Prevention: Address whether the project will have an adverse effect on the way that the wetland or floodplain will be able to minimize water and wind related impacts during large scale storm events.	No direct impacts to wetland or flood plain. See #4 above.
7. Water Quality: This item must be addressed for both the construction and post construction conditions. This item will address the quality of the surface waters associated with the resource area being impacted by the project.	See #4 & #5 above.
8. Water Pollution Control: This item must be addressed for both the construction and post construction conditions at the property.	See #4, #5 & #7 above.
9. Fisheries: Reserved for work taking place adjacent to ponds and perennial streams. This response must address both the construction and post construction conditions at the property.	Not applicable.
10. Shellfish: Not applicable in Franklin	Not applicable
11. Wildlife Habitat: This item must be addressed for both the construction and post construction conditions at the property.	According to the <i>Massachusetts Natural Heritage and Endangered Species Program</i> habitat map, the site is not located within an Estimated Habitat of Rare Wildlife or a Priority Habitat of Rare Species. Proposed garage location is currently comprised of manicured lawn.
12. Rare Species Habitat (including rare plant species): This item must be addressed for both the construction and post construction conditions at the property.	See Item #11 above.
13. Agriculture: This item must be addressed for both the construction and post construction conditions at the property.	Not applicable
14. Aquaculture: To date there are no aquaculture operations in Franklin.	Not applicable.
15. Recreation: This item must be addressed for both the construction and post construction conditions at the property and include both passive and active recreation.	Not applicable.

Erosion & Sedimentation Control Plan

Erosion and sedimentation controls consisting of a silt sock or similar will be installed prior to the start of construction activities. Erosion and sedimentation controls will be properly maintained and will remain in place until all disturbed soils have been stabilized and re-vegetated. Erosion and sedimentation controls will be inspected at regular intervals. The site will be kept clean throughout the construction process. All debris, trash, etc will be picked up and properly stored or disposed of before the end of each day. Erosion control inspectors will keep a log of all inspections and maintenance and will provide copies of those logs to Conservation staff and Commissioners upon their request.

Erosion Control Inspectors

Construction Sequence & Schedule

1. Record the Order of Conditions at the Registry of Deeds and provide proof of the recording to the Commission prior to the start of clean-up activities.
2. Prominently display the DEP File Number at the site.
3. Install the erosion controls.
4. The erosion controls will be inspected prior to the start of construction activities. The inspector will supply the Conservation Department with a letter stating that the erosion controls are installed according to the plan and that the erosion controls will be maintained until a Certificate of Compliance is issued.
5. Remove the existing pool and fill the remaining hole.
6. Prep the garage location for pouring the concrete slab.
7. Construct garage and porch.
8. Soil test for infiltrator unit.
9. Install infiltrator unit.
10. Re-seed disturbed lawn areas.

PROJECT NARRATIVE

1.0 Project Description

Lewis Street Realty LLC (hereafter "Applicant") proposed to develop the residential lot located on Lewis Street in Franklin, as depicted on the plan of record filed with the Norfolk County Registry of Deeds, Plan Book 52, Plan No. 2488. The project area corresponds to Lots 40 and 41 on the referenced plan (the "Site"). See *Section 7.0 Attachment A*.

The Site is 10,000 ft² and is located along the westerly side of Lewis Street, beyond the end of the paved travel way. The majority of the wooded residential lot is within the 100-ft buffer zone from the adjacent Bordering Vegetated Wetland ("BVW"), which is located off Site.

The Applicant proposes to improve the access to the property, per DPW specifications, and construct a 980 ft² single-family dwelling (the "Project"). Additional land disturbing activities incidental to construction include (but not limited to): sanitary sewer, water, gas, E.T.C. connections and the construction of a sub-surface infiltration system. No land disturbing activities are proposed within a resource area or the 25' No Disturbance Zone. The land disturbing activities associated with the Project are as follows:

Table 1- Project Alteration Summary

<u>Land Disturbing Activity</u>	<u>Alteration (ft²)</u>
Access improvements	1,340
Residential lot development	5,975
Total:	7,315

This Notice of Intent ("NOI") is being filed with the Town of Franklin Conservation Commission pursuant to the Massachusetts Wetlands Protection Act ("WPA") M.G.L.C. 131, § 40 and its implementing regulations (310 CMR 10.00) and the Franklin Wetlands Protection Bylaw (*Chapter 181*), for the proposed construction activities that will take place within the 100-ft buffer zone to a BVW.

2.0 Functions & Characteristics

The following section provides a description of the Project impacts on the functions and values provided by the resource area adjacent to the Site. Proposed impacts on the wetland buffer zone associated with construction and post-construction activities are discussed in *Section 5.0*.

2.1 Public Water Supplies

The nearest public water supply is located roughly 1,000 feet east of the Project. Zone II area are critical to protect the groundwater recharge that contributes to public water supply wells. The entire Project lies within the Zone II. Groundwater recharge will be maintained by infiltrating the volume of runoff generated from the Site's total impervious surface area.

2.2 Private Water Supplies

The Franklin Water Department services the area with potable water; therefore, there are no private water supplies adjacent to the Project.

2.3 Groundwater

The Project will mitigate the reduction of groundwater recharge, as a result of the proposed impervious surface area, by providing a subsurface infiltration system. The infiltration system has been sized to infiltrate 1-inch of runoff from the Site's impervious surface.

Add comment regarding soil tests

2.4 Flood Control

The Project is not located within the limits of the 100-year flood zone as shown on the FIRM map #25021C0309F dated 7/8/2025 (Section 7.0 Attachment B)

2.5 Erosion & Sediment Control (ESC)

Erosion & Sedimentation is managed for the Project by composed sock. See Design Site Plan for installation location. Additional Erosion & Sediment Control measures are documented in *Section 4.0*.

2.6 Storm Damage Prevention

The Project incorporates reduced impervious area and limited woodland clearing, along with a subsurface infiltration system, to mitigate potential impacts from storm events

2.7 Water Quality

In accordance with Chapter 153 § 16 B. (1) (a); the volume of runoff generated from 1-inch of runoff from the total impervious surface of the Site has been retained. The subsurface retention of stormwater runoff is presumed to treat the water quality volume and has achieved 90% TSS and 60% TP removal.

2.8 Water Pollution Control

Water Pollution Control for the Project is addressed for the Site according

2.9 Fisheries

No fishery habitats are located in the vicinity of the Site. The proposed subsurface infiltration system will provide groundwater recharge and water quality mitigation, ensuring that downgradient fisheries connected to Uncas Brook and its tributaries are not affected

2.10 Shellfish

This item is not applicable in Franklin.

2.11 Wildlife Habitat

The Project does not propose the construction of any physical barrier restricting the migration of wildlife and limits woodland clearing to the maximum extent practicable.

2.12 Rare Species Habitat

There are no Massachusetts Natural Heritage and Endangers Species habitats designated within the Site or vicinity per Natural Heritage Atlas 15th Edition dated August 1, 2021. The nearest habitat is located 1-mile east of the Project.

2.13 Agriculture

There are no current or proposed agricultural uses present on the Site.

2.14 Recreation

The Site is a privately owned parcel of land and there are no permitted active or passive recreational activities at the Site.

3.0 Vernal Pool Statement

There are no mapped potential or Natural Heritage Certified vernal pools adjacent or within the Project area. The nearest potential and certified vernal pools are greater than 500 ft and 4,500 ft respectively.

4.0 Riverfront Statement

The Project is not located within the vicinity of a perennial river. There are no Riverfront Area alterations associated with the Project.

4.1 Alternative Analysis Statement

The Project does not propose alterations within a riverfront area, propose septic components within the buffer zone, or propose 5,000 ft² of wetland fill. An alternative Analysis is not applicable to the Project.

5.0 Mitigation

5.1 Mitigation Narrative

The Project will involve activities within jurisdictional buffer zones protected under the Wetland Protection Act (WPA) and the Franklin Wetlands Protection Bylaw. Due to the Site's proximity to the existing wetland resource area, development of the Site will result in unavoidable permanent alterations of the buffer zone necessary for construction activities.

The existing paved traveled way terminates prior to reaching the existing lot frontage; therefore, it is necessary to extend the paved travel to develop the lot. The traveled way shall be extended 35-ft and constructed per DPW specifications (i.e. driveway rounding's, widths, cross-section, etc.). The improved traveled way consists of 84% impact to the 50–100 ft buffer zone and 16% to the 25-50 ft buffer zone. The end of the pavement is 40-ft from the adjacent resource area.

The 10,000 ft² Site consist of 9,049 ft² (90%) of upland area within the jurisdictional buffer zone. Land disturbance was limited to the greatest extent feasible in order to maintain the integrity of the buffer zone.

5.2 Mitigation – Buffer Zone Impacts

The following section will document buffer zone Impacts and the methods utilized to mitigate negative impacts to the resource area.

a. **Wetland Buffer Zone Impact**

The Site development proposes 5,820 ft² of land disturbing activities within jurisdictional buffer zones. The table below summarizes the buffer zone impacts.

Table 2- Residential Lot Development

Buffer Zone (ft)	Total Existing Area (ft ²)	Impact-Disturbed Area* (ft ²)	Buffer Zone Impact (%)
0-25	1,000	0	0
25-50	1,996	1,559	17
50-100	6,053	4,261	47
Total	9,049	5,820	64

b. **Proposed Wetland Buffer Zone Mitigation**

The proposed development of the residential lot provides buffer zone impact mitigation by providing groundwater recharge, water quality treatment, and woodland clearing minimization. By minimizing tree clearing to the maximum extent practicable; the constructed Site will retain 36% natural/undisturbed buffer zone.

6.0 Stormwater Management Narrative

The Project does not meet the applicability threshold requirements of the Massachusetts Stormwater Management Handbook and the Town of Franklin Stormwater Management Bylaw (*Chapter 153*). The Project is an exempt activity; therefore, stormwater management is not applicable.

6.1 Drainage Calculations

Subsurface infiltration is utilized to mitigate buffer zone impacts for the Site. The system has been sized to retain 1-inch of runoff from the Site impervious surface. The infiltration system consist of six (6) Stormtech SC-160LP chambers embedded in stone. The surrounding stone shall be 12-inches around the side with 8-inches of stone below the chamber invert and 8- inches of stone above. The total volume provided (Pro_{volume}) of the system is 160 ft³. The following calculations demonstrate compliance.

$$Req_{volume} = A_{new\ impervious} * D$$

$$A_{new\ impervious} = 1,878\ ft^2$$

$$Depth\ (D) = 1.0\ in$$

$$Req_{volume} = 157\ ft^3 < 160\ ft^3 = Pro_{volume}$$

7.0 Erosion & Sediment Control Plan

The following section demonstrates the methods utilized to control erosion and sedimentation during and following construction.

The Site Owner and/or Project Manager are assigned as ESC Coordinator(s)(the "Parties Responsible") for the operation, maintenance and reporting of the ESC Plan. The Parties Responsible shall notify the Conservation Commission or its Agent of any changes to the ESC Plan.

7.4 Final Stabilizations

a. Permanent Seeding

Seedbed Preparation

In areas where disturbance results in subsoil or fill material being the final grade surface, topsoil will be spread over the finished area at minimum depth of 4 inches.

The seedbed will be free of large clods, rocks, woody debris and other objectionable materials.

Fertilizer and lime will be applied to the seedbed according to the manufacturer's recommendations or soil tests.

The top layer of soil will be loosened to a depth of 3–5 inches by raking, tilling, disking or other suitable means.

b. Grass Selection/Application

Lawns will be stabilized with a mixture of Kentucky Blue Grass and Creeping Red Fescue at an application rate of 100 pounds per acre or 2.3 pounds per 1,000 square feet.

Seed will be applied uniformly by hydroseeding or broadcasting. Where broadcasting is used, the seed will be covered with .25 inch of soil or less.

c. Mulching

Hydro mulch will be applied immediately following seeding at an application rate of 90–100 pounds (2–3 bales) per 1,000 square feet.

7.5 Post-Construction ESC

a. Snow Removal

Snow shall be plied to the furthest extent of the buffer zone.

b. Deicing Chemicals

Application of deicing chemicals shall be done sparingly as needed to ensure the safety of the vehicles and pedestrians. Exterior storage of deicing materials on this property is prohibited.

c. Fertilizers, Pesticides, Herbicides

Organic, slow-release fertilizers should be used within the landscaped areas and maintained lawn areas. Use of pesticides and herbicides is discouraged. Outside storage of fertilizers, pesticides, and herbicides is forbidden.

d. Landscape Maintenance

Leaves, trimmings, and grass clippings shall be properly disposed of. If these materials are to be composted on-site, it shall be done outside of any wetland resource area or to the furthest extent of the buffer zone.

e. Street Sweeping

The driveway shall be swept as necessary with a minimum frequency of twice per year. The first sweeping shall take place in early spring after the snow has melted. The second sweeping should be done in autumn.

APPLICATION PROCESS SIGNATURE FORM

There are three different applications that can be submitted to undertake work in a jurisdictional area: a Notice of Intent (NOI), a Request for Determination (RDA) and a Minor Buffer Zone Activity (MBZA). All three applications have different criteria for submission and approval and the NOI and RDA are governed by both the state law and the local bylaw. The MBZA is issued under the local bylaw only.

When a potential applicant requests advice from the Conservation Agent on which application to file, the opinion of the Agent is based on the information given by the potential applicant and any other information available to the Agent, e.g. the town's GIS system. The Agent has no legal right to go onto private property at any time until after an application is filed or permission of the property owner is given.

It is important that all applicants understand that after an application is filed, additional information may come to light e.g. via a field inspection or a review of the application, that may impact the scope of the submitted application and the approval process. **Therefore, it is the ultimate responsibility of the applicant to decide which application to file.**

In light of the above, please sign below indicating an understanding of this policy and submit it with the application.

B. Fees

Fee should be calculated using the following process & worksheet. **Please see Instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).
