Franklin, MA 02038

Re: Warehouse/Industrial Development
100 Financial Park
Site Plan Application – Traffic Peer Review

Dear Mr. Rondeau:

BETA Group, Inc. (BETA) has received the additional documents dated June 7, 2023 for traffic-related items for the proposed project entitled "Warehouse / Industrial Development" located at 100 Financial Park in response to BETA's preliminary review comments in a memorandum dated June 1, 2023. This letter provides BETA's comprehensive findings, comments and recommendations.

BASIS OF REVIEW

The following documents were received by BETA and formed the basis of the review:

- Plans (45 sheets) entitled: Warehouse Industrial Development Site Development Plans 100/200 Financial Park Franklin Massachusetts, dated May 11, 2023, prepared by Highpoint.
- Traffic Impact and Access Study (TIA), dated April 2023, prepared by MDM Transportation Consultants, Inc. (MDM).
- Response to Comments – Peer Review of Traffic Memorandum, 100/200 Financial Park, dated June 7, 2023, prepared by MDM Transportation Consultants, Inc.

INTRODUCTION

The project site includes two parcels, located at 100 Financial Park in the Town of Franklin (the "Site"). The Site and all the surrounding lots are located within the Industrial zoning district.

The existing Site is the location of a 1-story office building with a footprint area of $180,000\pm$ sq. ft. and a 2-story warehouse building with a footprint area of $57,570\pm$ sq. ft. Paved parking areas are located to the north and south of the buildings. Access to the Site is provided within Financial Park, a private roadway which connects to Washington Street from the west.

The project proposes to construct two new warehouse buildings with $300,000\pm$ sq. ft of warehouse space. The existing $180,500\pm$ sq. ft office building will be demolished, and the existing warehouse building will be retained. The existing parking layout will be replaced with new areas of paved parking proposed and existing areas either retained, removed, or reconfigured. A new loading area with heavy duty pavement is proposed in the central area of the Site between the two new buildings.

COMPILED REVIEW LETTER KEY

BETA preliminarily reviewed this project previously and provided review comments in a letter to the Board dated June 1, 2023 (original comments in standard text), MDM Transportation Consultants, Inc. (MDM) provided responses (responses in italic text), and BETA has provided response comments (status in standard bold text). All other comments shown in standard text are original comments for this more comprehensive review.

FINDINGS, COMMENTS, AND RECOMMENDATIONS

The study area includes the following intersections in the vicinity of the site:

- Washington Street at King Street (signalized)
- Washington Street at Union Street and Arlington Street (unsignalized)
- Washington Street at Financial Park Drive (unsignalized)

The study area was found to be adequate, and the study methodology follows MassDOT Transportation Impact Assessment (TIA) guidelines.

Manual turning movement counts (TMCs) were collected on Thursday, January 26, 2023, from 7:00 AM to 9:30 AM and 2:00 PM to 6:00 PM. These time periods were chosen because they are representative of the combination of peak generator times of Franklin Park Campus and adjacent roadways. BETA concurs with the traffic data collection time periods.

Traffic volume data were also collected via a 24-hour automatic traffic recorder (ATR) count on Thursday, January 26, 2023 on Washington Street, just south of Financial Park Drive.

Data indicates the weekday AM peak period occurs from 7:30 – 8:30 AM and the PM peak period occurs from 2:45 – 3:45 PM which coincides with the Benjamin Franklin Classical Charter peak periods.

The TIA states that the existing campus is fully leased. The TIA states that baseline trip generation data was collected via ATR in January 2023 and was provided graphically and in table form (Table 2) for each existing site. The backup data is broken down by hour in the Appendix.

The peak hour and total daily volumes provided in the TIA differ from the backup data provided in the Appendix.

- T1. The peak hour and total daily volumes provided in the TIA differ slightly from the backup data provided in the Appendix. Please clarify the difference in volumes in addition to the difference in truck trips between the existing site and the proposed site.

Historical permanent count station data from I-495 and Route 1 were reviewed to determine the need for seasonal adjustment. Traffic volumes in January were found to be below average-month conditions, therefore, the volumes were increased by the average of the two stations which is 10 percent to provide baseline existing volume data.

Crash data were obtained from the MassDOT database for the most recent three-year period from 2020 to 2022. The highest crash rate, quantified as crashes per million entering vehicles, was found to be 0.25 Million Entering Vehicles (MEV) which is lower than both the statewide and District 3 average crash rates for unsignalized and signalized intersections.

- T2. Crash data for the years 2020-2022 from the MassDOT database were summarized in the TIA for the three study area intersections. At this time, our understanding is that MassDOT has not

"accepted" their crash data later than the year 2020 and crash data may be lower than normal due to the COVID-19 impacts on travel during 2020. Consideration should be given to providing crash data for the study area intersections for the years 2018-2019. MDM: The safety analysis has been expanded to include crash data for the years 2018-2022. The updated crash data from 2018 and 2019 is consistent with the 2020-2022 data, indicating no significant crash history at the study locations. No further review of crash analysis is required based on the crash history at the study locations. The expanded crash data for the study intersections is provided in the Attachments. BETA: The information has been provided. No further comment.

T3. Provide updated crash data worksheets with the correct intersection streets.

Background development-related traffic growth that may increase traffic within the study area was identified. The 160 Grove Street, 200 Grove Street, 585 King Street, 00-712 Union Street and 275 Washington Street development projects were identified as new developments. The projected trips for these projects were directly applied to the future volumes. It is our understanding that the 200 (206) Grove Street FedEx facility was operational during the data collection period, however, the trips added to the study area were minimal. BETA finds this overall approach acceptable.

MassDOT permanent count station data indicated an overall average traffic growth rate of 0.4 percent. No-Build traffic volumes were determined by applying a 1 percent per year growth rate over a seven-year period to 2030 to account for traffic growth. This growth rate is consistent with studies prepared for recent developments in Franklin.

The project-generated traffic volumes were determined by utilizing trip-generation statistics published by the Institute of Transportation Engineers (ITE) for Land Use Code (LUC) 150 Warehousing. The land use is appropriate. The project site is estimated to generate a total of 514 new trips on an average weekday with 51 (39 entering, 12 exiting) during the weekday morning peak hour, and 69 (19 entering, 50 exiting) during the weekday afternoon peak hour. Of these trips, the estimated number of trucks generated during the morning peak are six (11% of trips) and 18 (26% of trips) during the afternoon peak. Approximately 180 truck trips are anticipated daily.

T4. Provide the trip generation backup data for reference.

T5. Clarify the size of trucks the site will be generating.

T6. Although the TIA states that access to and from the site will not be permitted via the gated Grove Street driveway on the western side of the site based on preliminary discussions, we recommend that the existing number of vehicles accessing and egressing the Grove Street driveway be provided for reference. MDM: Detailed traffic count data by vehicle type for the Financial Park Drive near Grove Street is provided in the Attachments. The data indicates that approximately 20 daily passenger vehicle trips (10 entering and 10 exiting) through the gate, 45 daily school buses trips (22 entering and 23 exiting), and no articulated trucks used the gated driveway. BETA: Information has been provided. Verify that additional vehicles from the proposed warehouse will not utilize the gated driveway.

A trip generation comparison was provided between the ITE-based site trips for the proposed developments and the existing 300,000 sf warehouse (Imperial Dade). The empirical data revealed that the weekday morning (4:00 AM) and afternoon peaks (1:00 PM) are earlier than the peak hours used for the analysis which coincides with the peak periods for Financial Park and Washington Street. The TIA also included a comparison between the proposed warehouse use and the "by-right" office use which would

generate approximately 200 additional trips during the morning peak hour, 95 during the afternoon peak hour, and 1,442 more on a daily basis. This information is noted.

- T7. Journey to Work data and existing travel patterns were used to determine the distribution of trips.
Please provide the Journey to Work backup data for reference.

Traffic operations analysis was performed with Synchro software based on the Highway Capacity Manual 6th Edition methodologies.

- T8. Synchro backup traffic data sheets for the Baseline (Existing), No-Build, and Build morning and afternoon peak periods are missing in the Appendix for the Financial Parkway and Washington Street intersection and the Washington Street and Union Avenue intersection. Provide backup data sheets for review and reference. MDM: The Synchro backup traffic data sheets for the Baseline, No-Build, and Build weekday morning and weekday evening peak periods are provided in the Attachments. BETA: Information has been provided. No further comment.

Capacity analysis results show that all intersections currently operate and would operate during the Build condition at acceptable Level of Service (LOS), with most movements operating at LOS C or better during the weekday morning and afternoon peak hours. The Washington Street southbound left turn movement onto King Street operates at a LOS D under existing conditions but would operate at a LOS C during the morning peak and maintain LOS D during the afternoon peak during the 2030 Build condition.

- T9. Journey to Work data and existing travel patterns were used to determine the distribution of trips.
Please provide the Journey to Work backup data for reference.

- T10. The truck percentage was not increased for the Build condition analysis. Please clarify if reflecting the increase in truck trips would degrade the traffic operations at the King Street at Washington Street intersection.

Queue analysis indicates that the 95th percentile queue during the afternoon peak hour for the Washington Street southbound left turn lane extends beyond the 100-foot storage length by up to 50 feet.

The off-site mitigation consisted of the developer working with the Town of Franklin to "diagnose and repair" the vehicle detection system issues at the King Street and Washington Street intersection. BETA agrees with this mitigation.

FIELD VISIT & OBSERVATIONS

BETA conducted field site visits on Thursday, June 8, 2023, during the morning and afternoon peak periods to review existing traffic operations.

Tractor Trailers were observed to have a challenging time turning left into and out of Financial Park due to the tight geometry and must slow down entering the driveway which causes traffic to back up as they are trying to take the left.

Trucks turning left from Washington Street onto King Street were observed taking up both Washington Street lanes to make the turn which queues up vehicles or getting stuck within the intersection and then backing up in order to renegotiate the movement (shown Figure 2 photo).

BETA's understanding is that residents on Ivy Lane experience trucks on their street related to the Financial Park Drive development. Although BETA did not observe this type of activity during the field

Figure 1: Truck turning right out of Financial Park

observations, we kept this feedback in mind during observations. During our field observations we noticed that the Financial Park Drive development is not clearly defined with signs on Washington Street approaching the driveway in both the northbound and southbound directions. It is possible trucks miss the entrance to Financial Park due to not being able to see the sign, so they turn around on Ivy Lane. In addition, exiting Financial Park Drive there is a "Trucks Right Turn Only" sign (shown in the Figure photo). This could also impact Ivy Lane such that trucks may turn right from the driveway and then turn around on Ivy Lane to travel northbound.

- T11. Consideration should be given to installing signage for Franklin Park approaching the driveway on Washington Street in both directions.
- T12. Consideration should be given to providing a sign near Ivy Lane to deter truck traffic.

ADDITIONAL COMMENTS

- T13. Recommend providing recent speed data for Washington Street near Financial Park Drive.
- T14. Recommend providing sight distance analysis for Financial Park Drive at Washington Street.

If we can be of any further assistance regarding this matter, please contact us at our office.

Very truly yours,
BETA Group, Inc.

DEPARTMENT OF PLANNING AND COMMUNITY DEVELOPMENT

DATE: June 21, 2023
TO: Franklin Planning Board
FROM: Department of Planning and Community Development
RE: 100-200 Financial Way
Site Plan Modification

The DPCD has reviewed the above referenced Site Plan Modification application for the Monday, June 26, 2023 Planning Board meeting and offers the following commentary:

General:

1. The site is located at 100-200 Financial Way, and located in the Industrial Zoning District.
2. The proposed project includes the construction of a 220,000 sq/ft warehouse and a 65,000 sq/ft warehouse.
3. The Applicant has filed a NOI with the Conservation Commission.

Waivers:

- §185-21 – Parking, reduce from the required amount of 350 spaces to 262 spaces.

Comments:

1. The intent of tonight's meeting is to discuss traffic.
2. BETA has provided a traffic review letter.
3. The Applicant should consider re-designing the entrance/exit on Washington Street so that the trucks can turn in and out.

MEMORANDUM

DATE: June 7, 2023

TO: Mr. Gregory Rondeau, Chairman
Franklin Planning Board
355 E Central Street

Daniel A. Dumais, P.E. – Senior Project Manager

RE: **Response to Comments - Peer Review of Traffic Memorandum**
Proposed Warehouse Facilities
100/200 Financial Park, Franklin, MA

MDM Transportation Consultants, Inc. (MDM) has prepared the following responses to initial transportation-related comments as issued in a letter to you by BETA Group, Inc. dated June 1, 2023. To facilitate review, specific comments are paraphrased with corresponding responses.

Comment 1: *"Synchro backup traffic data sheets for the Baseline (Existing), No-Build, and Build morning and afternoon peak periods are missing in the Appendix for the Financial Parkway and Washington Street intersection and the Washington Street and Union Avenue intersection. Provide backup data sheets for review and reference."*

Response: The Synchro backup traffic data sheets for the Baseline, No-Build, and Build weekday morning and weekday evening peak periods are provided in the **Attachments**.

Comment 2: *"Crash data for the years 2020-2022 from the MassDOT database were summarized in the TIA for the three study area intersections. At this time, our understanding is that MassDOT has not "accepted" their crash data later than the year 2020 and crash data may be lower than normal due to the COVID-19 impacts on travel during 2020. Consideration should be given to providing crash data for the study area intersection for the years 2018-2019."*

Response: The safety analysis has been expanded to include crash data for the years 2018-2022. The updated crash data from 2018 and 2019 is consistent with the 2020-2022 data, indicating no significant crash history at the study locations. No further review of crash analysis is required based on the crash history at the study locations. The expanded crash data for the study intersections is provided in the **Attachments**.

Comment 3: "Although the TIA states that access to and from the site will not be permitted via the gated Grove Street driveway on the western side of the site based on preliminary discussions, we recommend that the existing number of vehicles accessing and egressing the Grove Street driveway be provided for reference."

Response: Detailed traffic count data by vehicle type for the Financial Park Drive near Grove Street is provided in the **Attachments**. The data indicates that approximately 20 daily passenger vehicle trips (10 entering and 10 exiting) through the gate, 45 daily school buses trips (22 entering and 23 exiting), and no articulated trucks used the gated driveway.
