

Take & Make DIY Coaster!

Materials Provided:

- Mason Jar Lid
- 1 Book Page
- Cork Board
- Mod Podge
- Paint Brush

Additional Materials Needed:

- Scissors
- Pencil
- Hot Glue Gun

Directions:

- Trace the inner portion of the mason jar lid onto the cork board and book page.
- Carefully cut out the cork board and the book page. Now all 3 items should be the same size.

- Using a glue gun, glue the piece of cork to the inner piece of the mason jar lid.
- Then use the mod podge to glue the book page to the cork.
- Next, you want to use the mod podge as a seal to protect the book page:
 - Brush a thin layer of mod podge on top of the page.
 - Use your finger to carefully smooth out any bumps in the page.
 - Allow to dry for 15-20 minutes then apply a second layer.
 - Again, allow to dry 15-20 minutes then apply a third layer.
 - I only applied 3 layers of mod podge, but you can apply more if you wish.
- Once your final layer of mod podge is applied, use the glue gun to glue the inner portion of the mason jar lid to the outer portion.
- Allow the coaster to fully dry (about 2 hours) before using.
